

CONSTRUCTION INSURANCE

Boynton & Boynton understands the construction industry and the unique coverage's that come into play. From complex, street, highway, bridge and marine exposures, to environmental operations, to artisan contractors, to general contractors with design build exposures. Since 1929, Boynton & Boynton has responded to the needs of contractors.

The insurance professionals at Boynton & Boynton are not satisfied simply procuring policies once a year, but work with our contractors all year round making sure bids are presented on time with the proper coverage and documentation to help our customers secure work. This includes OCP's , Rail Road Protective Policies, Site Pollution policies and water born exposures to satisfy complex DOT bids if needed. Contract review, to examine insurance requirements and risk transfer wording will also be conducted by our highly experienced staff.

Boynton & Boynton coordinates, and tailors risk management services to contractors' needs to help maintain the safest possible worksite which protects both employees, and third parties, which ultimately reduces costs.

Carefully examining existing programs for potential gaps, and securing highly competitive pricing from insurance carriers that best represent any potential construction operations is what we do best. Boynton & Boynton's expertise and large volume with carriers affords our clients the best combination of coverage and pricing.
