

HEALTHCARE INSURANCE

Boynton & Boynton has a long history and strong presence in the Healthcare Industry, insuring over 4000 doctors, healthcare facilities, and ambulance operations. With extensive experience and full access to all Insurance Carriers that are most active in the Healthcare field, our clients benefit with highly competitive rates and exemplary service.

Boynton & Boynton believes that the best method of managing costs is to employ a three pronged method of risk management and insurance cost containment.

- Losses, both from a severity and frequency standpoint lead to higher premiums, fewer insurance carrier choices, and potential disruption of operations. The management of risk from both an operational, and best practices standpoint, will help mitigate and control claims and reduce violations, both of which will reduce costs. This is best executed from a top down standpoint with strong management involvement.
- Boynton & Boynton has access to every major insurance carrier in the healthcare industry. It is this access that allows for intensive negotiation of the best possible coverage available at the best rates available during various insurance cycles.
- Boynton & Boynton understands the exposures & coverage needs of the healthcare industry and how they apply to various operations. An uncovered loss bears a heavy additional cost. The healthcare industry has very specific exposures not ordinarily found in many standard insurance programs. These special coverages must be evaluated and quoted to make a proper business decision.
